Allowed Claims: 1-11.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: none of the prior art either alone or in combination disclose or teach of the claimed combination of limitations to warrant a rejection under 35 USC 102 or 103. Specifically, with reference to independent claim 1, none of the prior art either alone or in combination disclose or teach of the claimed tip optical element unit for an immersion microscope specifically including, as the distinguishing features in combination with the other limitations, the claimed annular light blocking area provided at an interface between the first optical element and the second optical element and a gap between the sample and the first optical element is filled with liquid having a refractive index larger than air. Specifically, with reference to independent claim 2, none of the prior art either alone or in combination disclose or teach of the claimed tip optical element unit for an immersion microscope specifically including, as the distinguishing features in combination with the other limitations, the claimed light blocking area sandwiched between the first optical element and the second optical element and a gap between the sample and the first optical element is filled with liquid having a refractive index larger than air. Specifically, with reference to independent claim 3, none of the prior art either alone or in combination disclose or teach of the claimed tip optical element unit for an immersion microscope specifically including, as the distinguishing features in combination with the other limitations, the claimed light blocking area sandwiched between the first optical element and the second optical element and a third optical element embedded at a

center of the first optical element and the second optical element. Specifically, with reference to independent claim 7, none of the prior art either alone or in combination disclose or teach of the claimed method of making a tip optical element unit for an immersion microscope specifically including, as the distinguishing features in combination with the other limitations, the claimed beam restricting element sandwiched between the first optical element and the second optical element and a gap between the sample and the first optical element is filled with liquid having a refractive index larger than air. Specifically, with reference to independent claim 8, none of the prior art either alone or in combination disclose or teach of the claimed method of making a tip optical element unit for an immersion microscope specifically including, as the distinguishing features in combination with the other limitations, the claimed light blocking area sandwiched between the first optical element and the second optical element and embedding a third optical element in the concave portion at the center of the first optical element and the second optical element.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
